

06. Export aur Import

Export ke tarike

1. Declaration ke aage:

```
js

export let months = ['Jan', 'Feb'];
export const YEAR = 2015;
export class User { constructor(name) { this.name = name; } }
export function sayHi() {} // function/class ke baad ; nahi lagate
```

2. Alag se list bana ke:

```
js

function sayHi() {}
function sayBye() {}
export { sayHi, sayBye };
```

Import ke tarike

```
js

import { sayHi, sayBye } from './say.js'; // named
import * as say from './say.js';         // sab kuch ek object me: say.sayHi
```

Explicit list behtar hai (chhote naam, code ka overview saaf). Bundlers unused cheezein hata dete hain, to zyada import karne se darne ki zarurat nahi.

as se rename

```
js

import { sayHi as hi } from './say.js';
export { sayHi as hi, sayBye as bye };
```

Export Default

Jab module me **sirf ek main cheez** ho:

```
js
```

```
// user.js
export default class User { ... }

// main.js
import User from './user.js'; // curly braces nahi
```

- Ek file me sirf **ek** `export default`.
- Default export ka naam nahi bhi de sakte.
- Import karte waqt koi bhi naam de sakte ho (isliye kuch teams sirf named exports prefer karti hain).

Named

Default

```
export class User {}
```

```
export default class User {}
```

```
import { User } from ...
```

```
import User from ...
```

Dono saath: `import { default as User, sayHi } from './user.js'`.

Re-export

Import + export ek saath. Package ka ek "main" entry file banane me kaam aata hai:

```
js

// auth/index.js
export { login, logout } from './helpers.js';
export { default as User } from './user.js';
```

- Re-exported cheezein us file me khud **use nahi** kar sakte.
- `export * from './user.js'` **default ko re-export nahi karta**. Uske liye alag likhna padta hai:

```
js

export * from './user.js';
export { default } from './user.js';
```

Summary

- Import: `import {x}`, `import x`, `import * as obj`, `import "module"` (sirf code run karne ke liye).
- `import/export` **top-level par hi** likh sakte ho, `if` ya `{}` block me nahi.

- Conditional import chahiye? Agla topic: **dynamic import**.
