Main baat

Code editor wo jagah hai jahan programmer **sabse zyada time spend karta hai**. Editors do main type ke hote hain: **IDE** aur **Lightweight editor**. Kai log dono use karte hain.

1. IDE (Integrated Development Environment)

- Ye ek **powerful editor** hai jo poore **project** ke saath kaam karta hai, sirf ek file ke saath nahi.
- Features:
 - Project ki saari files load karna aur unke beech navigate karna
 - Poore project ke hisaab se **autocompletion**
 - **git** jaise version control ke saath integration
 - Testing environment aur dusre project-level tools
- Options:
 - **Visual Studio Code** → free, cross-platform
 - **WebStorm** → paid, cross-platform
 - **Visual Studio** → paid, sirf Windows, .NET ke liye best (free version: Community). **VS Code se alag hai**, confuse mat hona.
- Zyadatar IDEs paid hote hain lekin **trial period** milta hai.

2. Lightweight Editors

- IDE jitne powerful nahi, lekin **fast, simple aur elegant** hote hain.
- Kaam: koi file **turant kholna aur edit karna**.
- IDE start hote waqt zyada data load karta hai, isliye ek file ke liye lightweight editor tez hota hai.
- Plugins lagane par inme bhi IDE jaise features aa jate hain, isliye dono ke beech **strict line nahi hai**.
- Options:
 - **Sublime Text** → cross-platform, shareware
 - **Notepad++** → Windows, free
 - **Vim** aur **Emacs** → bahut acche hain, agar chalana aata ho

3. Kaun sa editor chunein?

- Editor ka choice **personal hota hai**, projects aur habits par depend karta hai. Bahut bahas mat karo.
- Author ki raay:

- **Frontend** zyada karte ho to → **VS Code**
- Dusri language/platform zyada aur frontend thoda → XCode (Mac), Visual Studio (Windows) ya JetBrains family (WebStorm, PHPStorm, RubyMine, etc.)

Quick Summary

Type	Kaisa hai	Example
IDE	Powerful, project-level, thoda heavy	VS Code, WebStorm, Visual Studio
Lightweight	Fast, simple, single file ke liye best	Sublime Text, Notepad++, Vim

Beginner ke liye: frontend/JavaScript seekh rahe ho to **VS Code** se start karo.
