

Developer Console - Simple Hinglish Summary

Source: <https://javascript.info/devtools>

Main baat

Code me **errors zaroor aayenge**. Lekin browser me errors normal user ko **by default dikhte nahi hain**, isliye pata nahi chalta ki kya toota hai. Isi ke liye browsers me **Developer Tools** hote hain, jinse errors dekh sakte hain aur JavaScript commands chala sakte hain.

Zyadatar developers **Chrome ya Firefox** use karte hain kyunki inke dev tools sabse best hain.

1. Google Chrome

- **Windows/Linux:** `F12` dabao
- **Mac:** `Cmd + Opt + J`
- Dev tools by default **Console tab** me khulte hain.
- Console me kya dikhta hai:
 - **Laal (red) error message**, jaise unknown command
 - Right side me **clickable link** (jaise `bug.html:12`) jo batata hai error kis **line number** par hai
 - Neeche **blue** `>` symbol hota hai. Yahan aap **JavaScript commands type karke** `Enter` dabake chala sakte ho.
- **Multi-line code:** `Shift + Enter` dabao. Sirf `Enter` dabane se code turant run ho jata hai.

2. Firefox, Edge aur dusre browsers

- Zyadatar me `F12` se dev tools khulte hain.
- Look & feel almost same hota hai. Ek seekh liya to dusra aasani se aa jata hai (Chrome se start kar sakte ho).

3. Safari (sirf Mac)

- Pehle **Develop menu enable** karna padta hai:
 - **Settings** → **Advanced** me jao aur neeche wala checkbox tick karo.
- Uske baad `Cmd + Opt + C` se console khulta hai, aur top menu me **"Develop"** naam ka naya option aa jata hai.

Quick Summary

Browser	Shortcut
Chrome (Windows)	F12
Chrome (Mac)	Cmd + Opt + J
Firefox / Edge	F12
Safari (Mac)	Cmd + Opt + C (pehle Develop menu enable karo)

Dev tools se kya kar sakte ho: errors dekhna, commands chalana, variables check karna, aur bahut kuch.

Ab environment ready hai. Agle section me actual JavaScript seekhna shuru hoga.
